(U//FOUO) Improvised Explosive Device Concealed in Human Remains

(U//FOUO) In January 2013, insurgents in India placed improvised explosive devices (IEDs) in the bodies of two police officers who were killed during an ambush; these devices probably were designed to target first responders, medical personnel, and medical facilities.

(U) One of the IEDs detonated on-site, killing four civilians who were involved in recovery operations and the other IED was discovered by physicians during post-mortem inspection. The IED triggering mechanism in the second body contained both a pressure-sensitive switch and light-activated switch designed to initiate the IED when it was exposed to direct light.

(U//FOUO) Indian medical personnel were able to avoid detonation of the device when they noticed and acted on suspicious indicators. First responders encountering human remains may want to consider the following indicators, which could indicate the presence of an IED:

- (U) Unusual or fresh—possibly still bleeding or seeping—incisions accompanied by crude stitching.
- (U) Signs of post-mortem incisions or stitching.
- (U) The presence of IED related materials or hoax/actual devices in conjunction with an intact set of human remains.
- (U) A corpse placed in a manner/location requiring responders to immediately remove them from the encountered position/location.
- (U) Abnormal bloating or swelling of the body.
- (U) Foreign objects protruding from the body.

(U) Photo of the Recovered IED.

(U//FOUO) Although this concealment method has not been encountered in the Homeland and we have no indication at this time that violent extremists here are considering its use, we note the incident received broad English-language media coverage overseas, which could prompt technically-competent violent extremists to consider adopting the tactic.

(U) Report Suspicious Activity

(U) To report suspicious activity, law enforcement, Fire-EMS, private security personnel, and emergency managers should follow established protocols; all other personnel should call 911 or contact local law enforcement. Suspicious activity reports (SARs) will be forwarded to the appropriate fusion center and FBI Joint Terrorism Task Force for further action. For more information on the Nationwide SAR Initiative, visit http://nsi.ncirc.gov/resources.aspx.

IA-0123-13

(U) Prepared by the Office of Intelligence and Analysis (I&A) Homeland Counterterrorism Division, Terrorist Targets and Tactics Branch and the FBI Directorate of Intelligence. This product is intended to assist federal, state, local, tribal, territorial, and private sector first responders in effectively deterring, preventing, preempting, and responding to terrorist attacks against the United States. Coordinated with the National Protection and Programs Directorate, Office of Infrastructure Protection; the Office of Bombing Prevention; and the Transportation Security Administration, Office of Intelligence and Analysis.

(U) Warning: This document is UNCLASSIFIED//FOR OFFICIAL USE ONLY (U//FOUO). It contains information that may be exempt from public release under the Freedom of Information Act (5 U.S.C. 552). It is to be controlled, stored, handled, transmitted, distributed, and disposed of in accordance with DHS policy relating to FOUO information and is not to be released to the public, the media, or other personnel who do not have a valid need to know without prior approval of an authorized DHS official. State and local homeland security officials may share this document with authorized critical infrastructure and key resource personnel and private sector security officials without further approval from DHS.
