Guinea, Liberia, and Sierra Leone.² No significant security incidents have been reported in the last week, and all three countries remain generally stable.

(U) GUINEA

(U) No security incidents occurred in Guinea in the past week.

(U) LIBERIA

(U) No security incidents occurred in Liberia in the past week.

(U) SIERRA LEONE

(U) Growing distrust between local communities and the government’s response to the EVD outbreak likely fueled recent rioting in Sierra Leone, which will likely persist as the rate of infection continues to rise, resulting in additional acts of violence against security officials and health care workers.

> (U) According to press, authorities in Sierra Leone imposed a curfew in the eastern town of Koidu after a dispute between youth and police over a suspected case of EVD degenerated into gunfire and riots on 21 October. The head of the police unit said local youth had initiated the clashes by firing shotguns at police.³
