

U//FOUO) NVRIC Front Line 16-10: Social Media Security Recommendations For Public Safety Personnel

# THE NVRIC FRONT LINE

Pg. 1 of 2

#### (II) Overview

- (U) Public Safety personnel are urged to use caution when sharing information via social media. With recent officer-involved shootings around the country, those who support attacks against public safety affiliates can gain access to information shared online and may use it to condone violence.
- (U//FOUO) This Front Line provides recommendations for minimizing indicators of your public safety affiliations on social media to better protect you and your family's identity.

#### (U) Recommendations

- (U) Remove all material from your social media accounts that reference your involvement or affiliation with the public safety sector.
  - (U) Have all material that references your involvement with the public safety sector removed from family and friends' social media accounts.

Note: Photos/comments referencing affiliations with public safety are commonly posted to social media via family and friends. Be sure to un-tag yourself or request photos to be removed.

- (U) Do not list employment information on any social media websites.
- (U) Do not use your work email address to sign up for any social media accounts.
- (U) If signing into a social media account on a public computer, be sure the password is not saved after signing out.

# facebook Linked in twitter

• (U) You can view your Facebook page as your friends or the public see it.

\*Do this and assess what privacy changes need to be made

• (U) Restrict the information you share with others in the "About" section (You can remove your biography, hometown, employment, etc.)

\*By default, everyone can see your name, photo, and work/school networks you are a part of.

• (U) Adjust your settings so you can review posts and photos that you are tagged in before they appear on your timeline.

\*This allows you to ensure no posts or photos affiliating you with law enforcement get posted online.

• (U) Adjust your settings to disable search engines from pulling your Facebook page if someone searches your name.

\*If your name has been released as a law enforcement officer, the public will not be able to find you on Facebook by searching your name in a search engine.

• (U) You can view your LinkedIn page as your connections or the public see it.

> \*Do this and assess what privacy changes need to be made

• (U) LinkedIn profiles appear in public searches.

\*By default, everyone can see your name, picture, summary, current position, education, and groups.

• (U) Customize your profile to ensure the public does not have access to too much information.

\*For example, you might view your profile as the public would see it and realize it says you work for FCPD.

• (U) Do not accept or request to connect with people you do not know.

- \*This will limit your profile views to only people you know and trust.
- (U) Do not link your LinkedIn account to your Twitter account.

\*This could defeat the purpose of having strict security settings on one application, as it would allow other's direct access to the other application.

• (U) Enable "Tweet Privacy" and disable all "Tweet Location" accessibilities.

\*This will shut off the geolocation for all tweets you send. This is especially important if you are tweeting in a work related location.

(U) Disable the "Discoverability," "Personalization," and "Promoted Content" options for additional security.

> \*This will stop people from being able to search vou by vour email address and will disable twitter from "remembering" your web searches if they are work-related.

#### (U) Security Setting Instructions

Instructions for the above mentioned security setting recommendations can be found on the following security setting instructions page.
